Dear Hiring Team,

I am applying for the Software Engineer role at Paperboat Works. Your brief describes a production workspace for creative teams. My experience building asset catalogues and review services would be relevant to the approval workflow and integration work it outlines.

At Lantern Studio, I built a review service that brought six approval steps into one workspace. I worked with designers and production coordinators to map decisions and exceptions, then implemented the API and background processing. I also added integration tests, release checks and operational dashboards so the team could maintain the service after launch.

At Mosslight Tools, I built search and import features with input from support and design. We evaluated search changes against a fixed set of queries and made rejected imports available for correction and replay. I would welcome a conversation about your current workflow, its failure points and the first improvements you want to deliver.

Kind regards,
Avery Quill
