Fictional example - all career details and results are invented.

Software engineer building dependable tools for creative teams. Combines backend development with close user collaboration to turn complex workflows into simple, maintainable services.

SKILLS

Engineering: Python, TypeScript, PostgreSQL, REST APIs.

Specialism: Workflow automation, search, integration testing.

Delivery: Cloud hosting, Docker, Git, CI/CD.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | *Lantern Studio* *2024 - Present*

- Zero-to-one delivery - built a review service for design teams, bringing six approval steps into one shared workspace.
- Improved asset processing with queued jobs and caching, reducing typical turnaround from 12 minutes to under 3 minutes.

Software Engineer | *Mosslight Tools* *2022 - 2024*

- Designed a searchable asset catalogue with PostgreSQL; validated relevance with a curated evaluation set.
- Partnered with support and design to automate imports, saving five hours of manual work each week.

Junior Developer | *Kitebox Workshop* *2020 - 2022*

- Developed internal reporting tools; added integration tests, documented release steps and supported team handover.

EDUCATION

BSc, Computer Science | *Westmere College* *2020*
